IN THE CLAIMS:

Please amend claim 1 as follows:

Claim 1 (Twice Amended). An electronic package, comprising:

a conductive trace layer having a first side and a second side, the conductive trace layer being patterned to define a plurality of interconnect pads;

a dielectric substrate mounted on the first side of the conductive trace layer made of a non-conductive polymer blended with high dielectric constant particles;

a capacitor having a capacitance of from about 1 nF/sq.cm. to about 100 nF/sq.cm. including a first conductive layer, a second conductive layer and a layer of dielectric material disposed between the first and the second conductive layers, the first conductive layer mounted adjacent to the second side of the conductive trace layer;
